

Issues

Issue	Solution
The login page would not let us login with the correct details – provided an error	there was an inheritance issue due to us calling an object that wasn't initialised because we weren't calling it statically, which is what we should have been doing.
The JCalander package did not come pre-installed in the Frame library	We had to create a library folder in Eclipse during installation which wasn't previously there
Eclipse was not updating the code when members of KentSoft were pushing to their branches	We were having to copy out the changes made on the local machine onto the new machine. After going some google searching, it appears it's a common problem with Git and Eclipse. As a result the team are now toying with the idea of switching to a new IDE
We have a dependency issue with the import org.apache.commons.io.fileutils, only appearing on mac but not on windows	Edited build.gradle file and added eclipse in as a plug-in
Image on the website took a while to load.	Lowered the resolution so it would load quicker.
When accessing personal records and then logging out the personal records frame would not close.	Made the log out function close all frames.
JTable allowed multiple people to be selected.	Setting single selection to the Jtable, so only one person could be selected.
The person being reviewed tries to download draft; it would download any of their past reviews not specifically the current review.	Amending SQL query to ensure it downloads most recent review.
